Art Unit: 1752

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-4, 6-10 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Sampei (US Patent No. 6,190,854).

Sampei discloses a material having a thermally developable material having having fluorine surfactant which is a (meth)acrylate polymer which has fluorinate alkyl group on its side chains, and which has a number a layer average molecule weight of not more than 30,000 in terms of standard polystyrene conversion and more preferably from 2,000 to 10,000; the fluorine containing surfactant is incorporate in any of image forming layer, component layer, or the secondary component layer, but preferably a layer provide on the image forming layer side, or in an outermost layer provided opposite of said image forming layer, for example protective layer. See column 5, lines 47-67, column 6, formula (A-a), (A-b), A-1 to A-7; columns 7-13, formulae A-8 to A-65; (meth) acrylate structural unit of the (meth)acrylate polymer having the alkyl

Art Unit: 1752

group of formulate in columns 15-16, C-1 to C-19; columns 17-18, C-20 to D1-17; Table 1 in column 19, and Example in columns 39-40, Table 2. such as sample 106. The (meth)acrylate structural unit of the (meth)acrylate polymer is considered as hydrophobic group within the meaning of monomer claimed in the present claimed invention. The copolymer of Sampei et al of formula A-1 to A-10 overlaps that of the claimed invention. Therefore, the claimed invention lacks novelty; alternatively, it would have been obvious to the worker of ordinary skill in the art to use the fluorinated copolymer taught therein

4. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sampei (US Patent No. 6,190,854) as applied to claims 1-9 above, and further in view of Artimoto et al (US Patent No. 6,475,697). The tin oxide has been known to be used in the electrically conductive layer for photothermographic material and taught in Arimoto et al in column 18, lines 9-22. It would have been obvious to the worker of ordinary skill in the art at the time the invention was made to use the tin oxide taught in Arimoto et al to improve the antistatic property of the material taught in Yonkoshi et al, and thereby provide a material as claimed.

Response to Arguments

5. Applicant's arguments filed March 22, 2005 have been fully considered but they are not persuasive for the reason set forth the rejection above. The applicants' argument on March 22, 2005 is based on the unexpected results presented in the Declaration on March 22, 2005.

It is the Examiner's position that the invention as claimed is still anticipated by Sampei et al since the compound of the formula A-1 to A-7 and the monomer having hydrophobic group of formula in columns 15-18 are the compound of the Sampei et al preferred embodiment. Therefore, the invention as claimed have been known and preferred in Sampei et al and the

Art Unit: 1752

invention lacks novelty. The worker of ordinary skill in the art would have also selected the compound of formula within the scope of formula in column 6, formula (A-b) with an expectation of achieving a material having smooter value of the surface of the image layer of not more than 100 mm Hg taught therein. The argument with respect to the unexpected results is not persuasive. First, "(E)vidence of secondary considerations, such as unexpected results or commercial success, is irrelevant to 35 U.S.C 102 rejections and thus cannot overcome a rejection so based. In re Wiggins, 488 F.2d 538, 543, 179 USPQ 421, 425 (CCPA 1973). Second, the Declaration is not commensurate with the scope of the claimed invention; the scope of the claimed invention encompasses the scope of the use the surfactant in any layer of the photothermographic material such as in the image forming layer, the layer provide an the image image layer side of the outermost layer provided opposite to the image forming layer such as disclosed in Sampei et al in column 5, lines 47-53, while the Declaration shows only the use of the surfactant on the back side of the support. Only one compound of formula M-5210 wherein n is 3 has been tested whereas the compound of formula 1 encompasses n form 1-4. The samples shown in the Declaration were also not accordingly to the material exemplified in Sampei et al while the composition of the claimed material wholly encompasses the material exemplified in Sampei et al. Moreover, the results shown in the Declaration is not related to the results shown

fails to show such unexpected improvement of those results. The Declaration therefore has a

probative value in overcoming the prima facie case of obviousness rejection.

Conclusion

in Sampei et al, for instance the results shown in column 30-40 Table 2 such as smoother surface

value, density variation, and characteristic variation when thermally developed. The Declaration

Art Unit: 1752

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thorl Chea whose telephone number is (571) 272-1328. The examiner can normally be reached on 9 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia H. Kelly can be reached on (571)272-1526. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR
